

Medi-*e*MR

The Complete EHR Solution

Voice Capture & Recognition

Direct Voice Dictation

Dictation may be captured from any device.

Medi-EMR will integrate with your transcription service or on-site transcriber with no additional fees.

You can choose to give your transcriber a portal that allows them to transcribe directly to a template or directly into the patient record.

Your dictation can be fed through Dragon NaturallySpeaking 9 for automatic transcription, allowing you to store your .wav files as text within the patient record. These files can be printed when needed.

Dragon NaturallySpeaking Medical 9

Dragon NaturallySpeaking 9 Medical will fit right into your enterprise IT infrastructure. The expanded Roaming User feature lets you access your unique "user profile" from any workstation in your organization's network, so you can "roam" your hospital, clinic or practice and always have access to the power of Dragon NaturallySpeaking. Dragon NaturallySpeaking 9 Medical also comes with a complete library of 14 medical specialty and 60 sub-specialty vocabularies, as well as the tools to further customize vocabularies for a specific practice. Finally, Dragon NaturallySpeaking 9 Medical will work with Medi-EMR to allow the physicians or technicians to store the .wav file as part of the permanent Electronic Health Record.
